

IC Engine – "Disruptive Technology Again?"

Austin, Texas 8-9-18:

In 1859 an invention rocked the world! By 1886, Carl Benz began the first commercial production of motor vehicles with internal combustion engines. Angel Labs LLC is poised to make history (A Reality!!) as we forge ahead with the commercial roll-out of the exotic MYT(Massive Yet Tiny) engine. Here at Angel Labs there is a palpable expectation of what 2018 will bring. Civilization has benefitted greatly from the advancements made to the internal combustion engine. The life expectancy of the IC engine, considered by many to be on the verge of extinction, or even on the precipice of abandonment, has now been extended indefinitely. One man, Raphial RG Morgado, has worked tirelessly to seal the IC engine's future, building on a tried and true foundation. Raphial has examined and extrapolated the primary components of what has been for over 100 years the prime mover of civilization. This master craftsman has NOW reconfigured the IC engine for the 21st century. A perfect stew of mechanical efficiency, minimal friction loss, low part count, high torque, and unmatched fuel efficiency has delivered a quintessential power plant to drive the world.

With 150+ "pool of inventions" and 31 years of "breakthrough technologies", Raphial and his team have developed a roadmap to usher in the next industrial revolution from the great state of Texas. These inventions cover land, sea, and air. Ultimately, the goal is to introduce several revolutionary products every quarter of the year. Angel Labs is a close-knit family of professionals working as a team to make these inventions commercially viable products.

Having won first prize in the 2005 Emhart-NASA tech briefs "Create the Future" design contest and garnering a lion's share of interest at the 2006 LA Auto Show, the MYT engine has been captivating the masses ever since. See YouTube: <https://www.youtube.com/watch?v=kGIUZg2pC0Q>.

Even though the company website has been quiet the lab has been very busy and now the 4th generation of the MYT engine technology will be an integral part and the STAR of our "dog and pony show". Because of the advancements made to the original design of the MYT engine, Angel Labs LLC is looking for a commitment from a financial institution in order to take the company public(with an IPO at the NYSE) while providing engines for the 2 largest markets being the shipping industry(the biggest business that

you know nothing about) where 90% of WORLD TRADE is carried out by the International Shipping Industry, and Power Generation which everyone knows is a necessity and “BIG”. These 2 markets make up \$30 TRILLION in annual income, the largest “Dynamic Duo” ever assembled!

Please don't ride in the backseat when the ride of your life is now available. Take the wheel of innovation and let's steer our generation down a road paved for success. Please visit www.angellabsllc.com for a snapshot of the company and feel free to call if you would like to join the team. Accredited Investors ONLY.
